# Highlights

## 2700-2200K [LED lamps]

Light can have different color temperatures, indicated in units called Kelvin (K). Bulbs with a low Kelvin value produce a warm, more cozy light, while those with a higher Kelvin value produce a cool, more energizing light.

## Soft Sparkling light

Innovative design for optimal light performance

## High color rendering (CRI>80)

The color rendering index (CRI) is used to describe the effect of a light source on color appearance. Natural outdoor light has a CRI of 100 and is used as the standard of comparison for any other light source. The CRI of Philips LED light bulbs is always higher than 80, close to the sun's value, reflecting colors truly and naturally.

## Beautiful, switched on & off

Familiar shapes are a perfect fit for your fixtures: we have retained the shapes and appearance of the classic light bulb

## Instant light when switched on

No need to wait: Philips LED light bulbs provide their full level of brightness immediately upon switching on.
